PROJECTS (Click on image to view the projects)

GoSafe is an App considered in this pandemic to help users eat in restaurants and sure that restaurants comply with safety rules. GoSafe has gamification to convince the customer to use the app and share their experience with other users.

This application was developed with React.

Ironplaces is a website extension that helps the future and new students to find restaurants, hotels, and bars near Ironhack place and see all discounts that a student has and the admins can manage this.

This App was built with React, Node.js, MongoDB and using services from Google Maps through Axios to allow us the locations. To login the users and admins was used Firebase.

Co Meal is a collaboration platform where you can create or find events to cook meals with local hosts. The main idea here, was to work with Backend. In this app we can add, edit, and delete events(CRUD); the user can login and also was used Recipes Api to allow the recipes to the user with Axios.

Race for Christmas, it's a racing game where Santa Claus needs to catch all presents and run away from obstacles in the snowy forest. The main idea was to work with Canvas, HTML5, CSS3, and Javascript. The main idea was to work with Frontend.
